Meeting Policy Reference: Recording, Lobby and Retention

KB-MTG-2003 | NetCore Meet 5.0 | Last updated: 2026-09-10 | Status: current

Summary

This policy defines how NetCore Meet 5.0 handles meeting recording permissions, cloud recording retention, legal hold, auto-transcripts, lobby admission, and policy precedence. It applies to organization, group, and user-level meeting policies configured in NetCore Control Hub.

Applies to: NetCore Meet 5.0, NetCore Control Hub, NetCore Meet desktop app for Windows and macOS, NetCore Meet mobile app, NetCore Meet web client, Meet Starter, Meet Business, Meet Enterprise, Webinar add-on

Purpose

This article is the current policy reference for NetCore Meet 5.0 meeting governance. It standardizes recording, retention, transcript, lobby, and policy-precedence behavior across NetCore Control Hub-managed organizations.

For the superseded NetCore Meet 4.2 retention behavior, see KB-MTG-2004. For meeting join failures related to locked meetings, lobby admission, or network port access, see KB-MTG-2007 for MTG-JOIN-1003 Meeting Locked or Host Lobby Active and MTG-JOIN-1007 Media Ports Blocked by Firewall.

Scope

This policy applies to scheduled meetings, instant meetings, recurring meetings, and webinars hosted on NetCore Meet 5.0. It applies to users joining from the desktop app, mobile app, and web client.

This policy does not define media-quality thresholds or SSO behavior. Operational troubleshooting for MTG-MED-4102 Media Path Degraded (high packet loss), MTG-MED-4105 No Audio Device Detected, MTG-SSO-6001 SAML Assertion Invalid or Expired, and MTG-SSO-6004 IdP Certificate Mismatch is covered by separate troubleshooting content. NetCore Calling errors MTG-CALL-7002 Number Not Provisioned and MTG-CALL-7010 Emergency Address Missing are outside the scope of NetCore Meet meeting policy.

- In scope: cloud recording permissions, recording retention, legal hold, auto-transcripts, lobby behavior, and policy precedence.
- Out of scope: firewall design, SSO certificate rotation, media-path quality remediation, device driver troubleshooting, and NetCore Calling dial-plan or emergency-address provisioning.

Definitions

Use the following terms consistently when reviewing or configuring NetCore Meet 5.0 policies in NetCore Control Hub.

- Internal user: A licensed or managed user in the organization’s NetCore Control Hub tenant.
- External participant: Any meeting participant who is not a managed user in the hosting organization’s tenant.
- Host: The user who owns or starts the meeting and whose meeting policy is evaluated for recording and lobby behavior.
- Co-host: A participant assigned by the host to assist with meeting management. Co-hosts can start cloud recording only when the effective policy allows it.
- Cloud recording: A recording stored in NetCore Meet cloud storage and governed by the organization’s retention setting.

- Retention period: The number of days a cloud recording is retained before expiration and deletion, unless legal hold applies.
- Legal hold: A preservation state that prevents cloud recording deletion regardless of normal retention expiration.
- Auto-transcript: The text transcript generated automatically for cloud recordings in NetCore Meet 5.0.
- Effective policy: The final meeting policy calculated from organization, group, and user-level policy assignments.

Policy Statements

The following policy statements are mandatory for NetCore Meet 5.0 unless an approved exception is recorded under the Exceptions process in this article.

NetCore Meet 5.0 cloud recordings are retained for 365 days by default. Administrators may configure retention from 30 to 1825 days. Legal hold is supported and overrides normal retention deletion. Auto-transcripts are enabled for cloud recordings.

External participants wait in the lobby by default. Internal users may join directly unless a stricter organization, group, or user policy requires lobby placement for all participants.

- Recording permissions: Hosts can start cloud recording when their effective meeting policy allows recording. Co-hosts can start cloud recording only when recording is allowed and the meeting role permits co-host recording control. Participants cannot start cloud recording unless they are promoted to a role allowed by the effective policy.
- Retention: The default retention value for NetCore Meet 5.0 is 365 days. Allowed configured values are 30 through 1825 days. Values below 30 days or above 1825 days are non-compliant and must be corrected before policy publication.
- Legal hold: Legal hold prevents deletion of cloud recordings even when the configured retention period has elapsed. Legal hold must be applied only by authorized compliance or legal administrators in NetCore Control Hub.
- Transcripts: Auto-transcripts are enabled for cloud recordings in NetCore Meet 5.0. Transcript files follow the same retention and legal-hold state as the associated cloud recording.
- Lobby for internal users: Internal users may join directly by default. Administrators may require lobby placement for internal users at the organization, group, or user level when required by security policy.
- Lobby for external participants: External participants wait in the lobby by default. Hosts or co-hosts must admit external participants unless a stricter policy blocks external admission.
- Policy precedence: User-level policy takes precedence over group-level policy, and group-level policy takes precedence over organization-level policy. If a setting is locked at the organization level, the locked organization setting overrides group and user-level values.
- Multiple group membership: When a user belongs to multiple groups with meeting policies, the highest-priority group policy in NetCore Control Hub is evaluated before lower-priority group policies. If no user-level override exists, the highest-priority applicable group policy becomes the effective group policy.

Policy thresholds and escalation requirements

Policy area	Default or allowed value	Threshold condition	Required action	Escalation owner
Cloud recording retention	365 days default; configurable 30-1825 days	Configured value is less than 30 days or greater than 1825 days	Reject the policy change and restore a compliant retention value	Collaboration administrator
Legal hold	Supported in release 5.0	Recording is under legal hold and reaches retention expiry	Do not delete; preserve recording and transcript until legal hold is removed	Compliance administrator

Policy area	Default or allowed value	Threshold condition	Required action	Escalation owner
Auto-transcripts	Enabled for cloud recordings	Transcript is missing from a completed cloud recording after normal processing	Open a recording-service investigation and preserve the source recording	Collaboration administrator
External participant lobby	External participants wait in the lobby by default	External participants can bypass the lobby without an approved exception	Reapply default lobby policy or document exception approval	Security administrator
Internal user lobby	Internal users may join directly by default	Security policy requires stricter access control	Apply group or user policy requiring lobby placement for affected users	Security administrator
Policy precedence	User > group > organization, unless organization setting is locked	Effective policy differs from intended assignment	Review locks, group priority, and user overrides in NetCore Control Hub	Collaboration administrator

Enforcement

Administrators enforce this policy in NetCore Control Hub. Policy settings should be reviewed after tenant onboarding, license-tier changes, group restructuring, compliance requests, and release upgrades.

The recommended audit interval is monthly for standard tenants and weekly for tenants with active legal hold or regulated-recording requirements. Retention and lobby policy changes should be logged with the requester, approver, timestamp, old value, and new value.

- In NetCore Control Hub, go to Meet > Policies > Meeting Policies.
- Select Organization Default, a group policy, or a user policy.
- Verify that Cloud recording is set according to business requirements.
- Verify that Recording retention is within 30-1825 days. The standard value is 365 days.
- Verify that Auto-transcripts is enabled for cloud recordings.
- Verify that External participants wait in lobby is enabled unless an approved exception exists.
- Check whether the organization-level setting is locked before troubleshooting group or user policy behavior.
- For join failures where users report that the meeting is locked or the host lobby is active, use KB-MTG-2007 for MTG-JOIN-1003 Meeting Locked or Host Lobby Active. For media join failures caused by network port filtering, use KB-MTG-2007 for MTG-JOIN-1007 Media Ports Blocked by Firewall.

```
NetCore Control Hub audit example
Timestamp: 2026-11-06T09:42:18Z
Admin: admin.collab@example.internal
Path: Meet > Policies > Meeting Policies > Organization Default
Policy version: mtg-pol-org-default-v5
Cloud recording: Enabled
Recording retention: 365 days
Legal hold: Available
Auto-transcripts: Enabled
External participants wait in lobby: Enabled
Internal users wait in lobby: Disabled
Organization lock: Retention=Unlocked, External lobby=Locked
Effective precedence: User policy > Group policy > Organization policy, except locked organization settings
```

Exceptions

Exceptions must be approved before implementation and must include the affected user population, business justification, expiration date, and rollback owner. Permanent exceptions are not permitted for retention values outside the supported 30-1825 day range.

Legal hold is not an exception to retention; it is an approved preservation control. Recordings and transcripts under legal hold remain preserved until the hold is removed by an authorized compliance or legal administrator.

- Retention exceptions may use any value from 30 through 1825 days when approved by the data owner and compliance administrator.
- External lobby bypass exceptions must identify the meeting template, group, or user population and must be approved by the security administrator.
- Recording-disable exceptions for sensitive groups should be applied at the group policy level where possible, then overridden at the user level only when required.
- All exceptions must be reviewed before their expiration date. Expired exceptions must be removed or renewed with a new approval record.

```
Exception record example
Exception ID: EXC-MTG-2026-0417
Requested by: compliance.ops@example.internal
Approved by: sec.admin@example.internal
Policy object: Group Policy / Executive-Briefings
Change: Require lobby for internal users; keep external participant lobby enabled
Recording retention: 730 days
Legal hold: Not applied by default
Effective date: 2026-11-10T00:00:00Z
Expiration date: 2027-05-10T00:00:00Z
Rollback owner: collab.platform@example.internal
Related review: Monthly NetCore Meet policy audit

Change History

The following change history records the policy baseline for NetCore Meet 5.0. For the previous release behavior, see KB-MTG-2004.

Policy change history

Date	Release	Change	Impact
2026-11-06	5.0	Confirmed current policy baseline for recording permissions, retention, legal hold, transcripts, lobby behavior, and policy precedence	Current article status
2026-07-15	5.0	Documented default 365-day cloud recording retention and configurable 30-1825 day range	Administrators can align retention with compliance requirements
2026-07-15	5.0	Documented legal hold support and transcript retention alignment	Recordings and transcripts under legal hold are preserved beyond normal retention
2026-07-15	5.0	Documented external participant lobby default	External participants wait in lobby unless an approved exception applies
2025-12-01	4.2	Superseded fixed 180-day retention with no legal hold and no transcripts	Legacy behavior documented separately in KB-MTG-2004
